        android:layout_height="wrap_content"
        android:background="#eee"/>

    <Button
        android:onClick="SendData"
        android:layout_gravity="center"
        android:text="Ok"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content" />

</LinearLayout>
```

Java Code model 1 MyUserData: -----

```
package com.example.mynewfirebaselesson;

public class MyUserData {

    String data;

    public MyUserData(String data) {
        this.data = data;
    }

    public MyUserData() {
    }

    public String getData() {
```

```
return data;
}
```

```
public void setData(String data) {
this.data = data;
}
}
```

Java Code model 2 UserData: -----

```
package com.example.mynewfirebaselesson;
```

```
public class UserData {

String name;
String age;

public UserData(String name, String age) {
this.name = name;
this.age = age;
}

}
```

```
public UserData() {

}

}
```

```
public String getName() {
return name;
}

}
```

```
public void setName(String name) {
this.name = name;
}

}
```

```
public String getAge() {
return age;
}

}
```

```
public void setAge(String age) {
this.age = age;
}

}

}
```

MainActivity.Java:-----

```
package com.example.mynewfirebaselesson;
```

```
import android.support.v7.app.AppCompatActivity;
import android.os.Bundle;
import android.view.View;
import android.widget.EditText;
```

```
import com.google.firebase.database.DatabaseReference;
import com.google.firebase.database.FirebaseDatabase;
```

```
import java.util.ArrayList;
```

```

import java.util.HashMap;

public class MainActivity extends AppCompatActivity {

    private DatabaseReference databaseReference;

    EditText editText;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        editText = findViewById(R.id.write);

        databaseReference = FirebaseDatabase.getInstance().getReference().child("User");

    }

    public void SendData(View view) {

        String data = editText.getText().toString();

        MyUserData myUserData = new MyUserData(data);

        databaseReference.child("object").setValue(myUserData);

        //HashMap<String,String> hashMap = new HashMap<>();
        //hashMap.put("userdata",data);
        //databaseReference.setValue(hashMap); // for storing data in main root Info
        //databaseReference.child("user1").setValue(hashMap); // store data in child of root

        //}

    }

    // xml: // EditText editText

    //editText = findViewById(R.id.write);

    //public void SendData(View view) {

    //String data = editText.getText().toString();

    //MyUserData myUserData = new MyUserData(data);

    //databaseReference.child("object").setValue(myUserData);

```

```
//HashMap<String,String> hashMap = new HashMap<>();
//hashMap.put("userdata",data);
//databaseReference.setValue(hashMap); // for storing data in main root Info
//databaseReference.child("user1").setValue(hashMap); // store data in child of root

//}
```

// see this code if you want to store value using object

```
// UserData userData = new UserData("Mr Kabir","32");
// databaseReference.setValue(userData);
```

```
/*HashMap<String,String> hashMap = new HashMap<>();
hashMap.put("like","Facebook");
hashMap.put("hobby","Programming");
databaseReference.setValue(hashMap);
```

// I have done this using Hashmap*/

Add Data Using Firebase: Basic List of data same time entry in database!

ListModel.java:-----

```
package com.example.mynewfirebaselesson;
```

```
public class DataList {
```

```
String name;
```

```
public DataList(String name) {
this.name = name;
}
```

```
public DataList() {
}
```

```
public String getName() {
return name;
}
```

```
public void setName(String name) {
this.name = name;
}
}
```

MainActivity.java file only: -----

```

package com.example.mynewfirebaselesson;

import android.support.v7.app.AppCompatActivity;
import android.os.Bundle;
import android.view.View;
import android.widget.EditText;

import com.google.firebase.database.DatabaseReference;
import com.google.firebase.database.FirebaseDatabase;

import java.util.ArrayList;
import java.util.HashMap;

public class MainActivity extends AppCompatActivity {

    String[] name = {"rocky","nabila","fariha","tonmoy","jihan","kawsar","niloy","rima","sefa"};
    private DatabaseReference databaseReference;
    ArrayList<DataList> arrayList;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        databaseReference = FirebaseDatabase.getInstance().getReference().child("User");
        arrayList = new ArrayList<DataList>();

        int i = 0;

        while(i<name.length){

            DataList dataList = new DataList(name[i]);
            arrayList.add(dataList);
            i++;

        }

        databaseReference.child("list").setValue(arrayList);

    }

}

```

Add Data Using Push method Firebase: Basic push data by unique key-----

Main Java file-----

```

package com.example.mynewfirebaselesson;

import android.os.Bundle;
import android.support.v7.app.AppCompatActivity;

import com.google.firebase.database.DatabaseReference;
import com.google.firebase.database.FirebaseDatabase;

```

```

import java.util.HashMap;

public class MainActivity extends AppCompatActivity {

    private DatabaseReference databaseReference;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        databaseReference = FirebaseDatabase.getInstance().getReference().child("Test");

        HashMap<String,String> hashMap = new HashMap<>();
        hashMap.put("Name","GreatAdib");

        databaseReference.child("user1").push().setValue(hashMap); // for child

        //databaseReference.push().setValue(hashMap); for single root

    }

}

```

How to Store Image in Firebase Storage:-----

1. XML:-----

```

<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:layout_margin="10dp"
    android:padding="10dp"
    android:gravity="center"
    tools:context=".MainActivity">

    <Button

        android:onClick="UploadImage"
        android:text="Upload"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content" />

</LinearLayout>

```

2. MainActivity:-----

```

package com.example.mynewfirebaselesson;

import android.content.Intent;
import android.net.Uri;

```

```
DatabaseReference imagestore = FirebaseDatabase.getInstance().getReference().child("Image");
```

```
HashMap<String,String> hashMap = new HashMap<>();  
hashMap.put("imageurl", String.valueOf(uri));
```

```
imagestore.setValue(hashMap).addOnSuccessListener(new OnSuccessListener<Void>() {  
    @Override  
    public void onSuccess(Void aVoid) {
```

```
        Toast.makeText(MainActivity.this,"Totally completed!",Toast.LENGTH_SHORT).show();
```

```
    }  
});
```

```
    }  
});
```

```
    }  
});
```

```
    }  
    }  
    }  
    }
```

Upload Multiple Images in Firebase Storage-----

XML:--

```
<?xml version="1.0" encoding="utf-8"?>  
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"  
    xmlns:app="http://schemas.android.com/apk/res-auto"  
    xmlns:tools="http://schemas.android.com/tools"  
    android:layout_width="match_parent"  
    android:layout_height="match_parent"  
    android:orientation="vertical"  
    android:layout_margin="10dp"  
    android:padding="10dp"  
    android:gravity="center"  
    tools:context=".MainActivity">
```

```
    <Button  
        android:id="@+id/chooser"  
        android:text="Choose Image"  
        android:layout_width="wrap_content"  
        android:layout_height="wrap_content" />
```

```
    <Button  
        android:id="@+id/uploader"  
        android:text="Upload Image"  
        android:layout_width="wrap_content"  
        android:layout_height="wrap_content" />
```

```
    <TextView  
        android:layout_marginTop="50dp"
```

```

android:textSize="20sp"
android:textAlignment="center"
android:textColor="@color/colorAccent"
android:id="@+id/alert"
android:text="Here will be alert"
android:visibility="gone"
android:layout_width="match_parent"
